Pitch Deck

Problem statement

Existing decentralized identity solutions lack a dedicated platform for professionals to network and build their reputation in a secure and transparent manner. This creates a need for a web3 LinkedIn-like dApp that combines the benefits of blockchain technology with professional networking, offering enhanced privacy, control, and trust.

Wagmiclub

The solution

A decentralized application (dApp) that combines the best features of LinkedIn and blockchain technology. It provides professionals with a secure and transparent platform to network, build a verifiable reputation.

Professionals need a system to independently showcase their qualifications, experience, genuine connections, proof of previous work, transparent credential verification over than traditional networking platforms that lack transparency and trust with limited control over personal data.

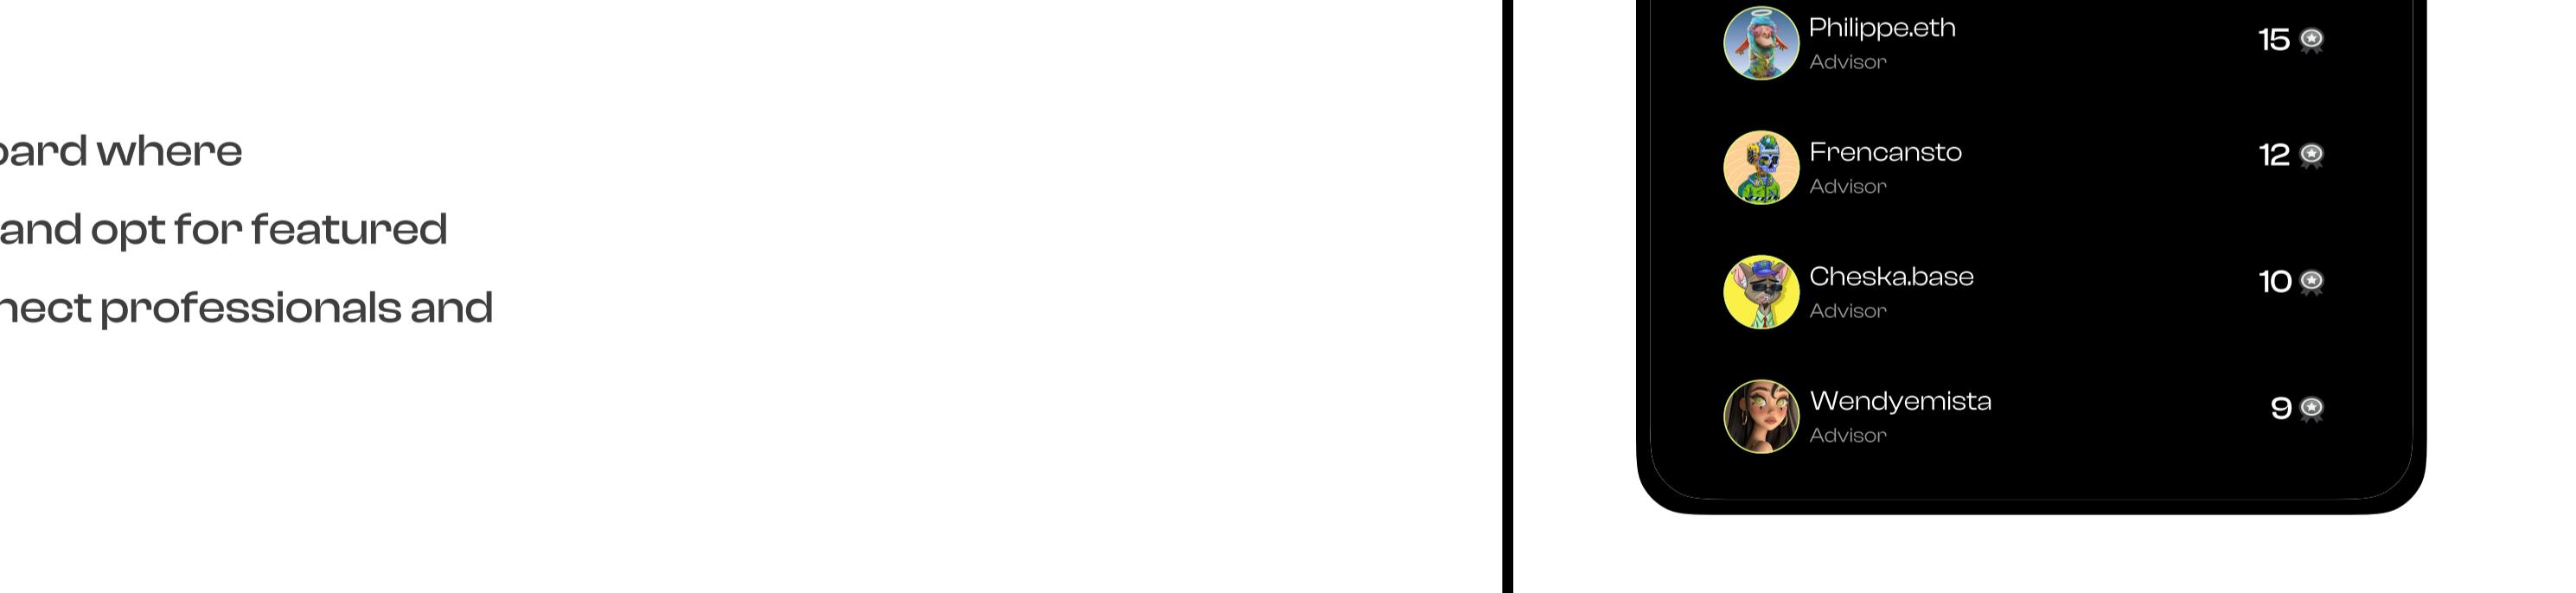

Our product

Wagmiclub is a decentralized platform for professionals like (creators, designers, advisors, investors, marketers, founders) to network, build reputation and show proof of previous work as NFT badge awarded by organizations, DAOs. This badge is an on-chain validation which shows an individual is recognized by a company/org. Our vision is to build a future where testimonials, staff recognition, work reputations hold more validity and become tamper proof on-chain, as they are non transferable, we are building wagmiclub on Lukso blockchain.

Our dapp provides super user-friendly interface that anyone can easily navigate. Professionals can effortlessly create a profile, network, earn trustscores, reputation badge and medals.

Recruiters will have the opportunity to explore a diverse pool of professionals through our platform marketplace. We made it easy to identify top talents by referring to the leaderboard which ranks profiles based on on-chain badge, medals and trustscore.

The market

Target Market

Our platform is for everyone on the internet. Simply create a profile, earn and showcase your merit badges, trustscore, to demonstrate your on-chain reputation.

Market Size

With millions of professionals & recruiters worldwide seeking better networking solutions, our decentralized platform empowers individuals to showcase their work experience and skillset securely and verifiably.

Competitive Landscape

We find a few players exploring the intersection of blockchain and professional networking while we find no direct competitors offering web3 LinkedIn solution at the moment. Our project stands out by providing friendly user interface, onboarding,

on-chain reputation system using blockchain technology.

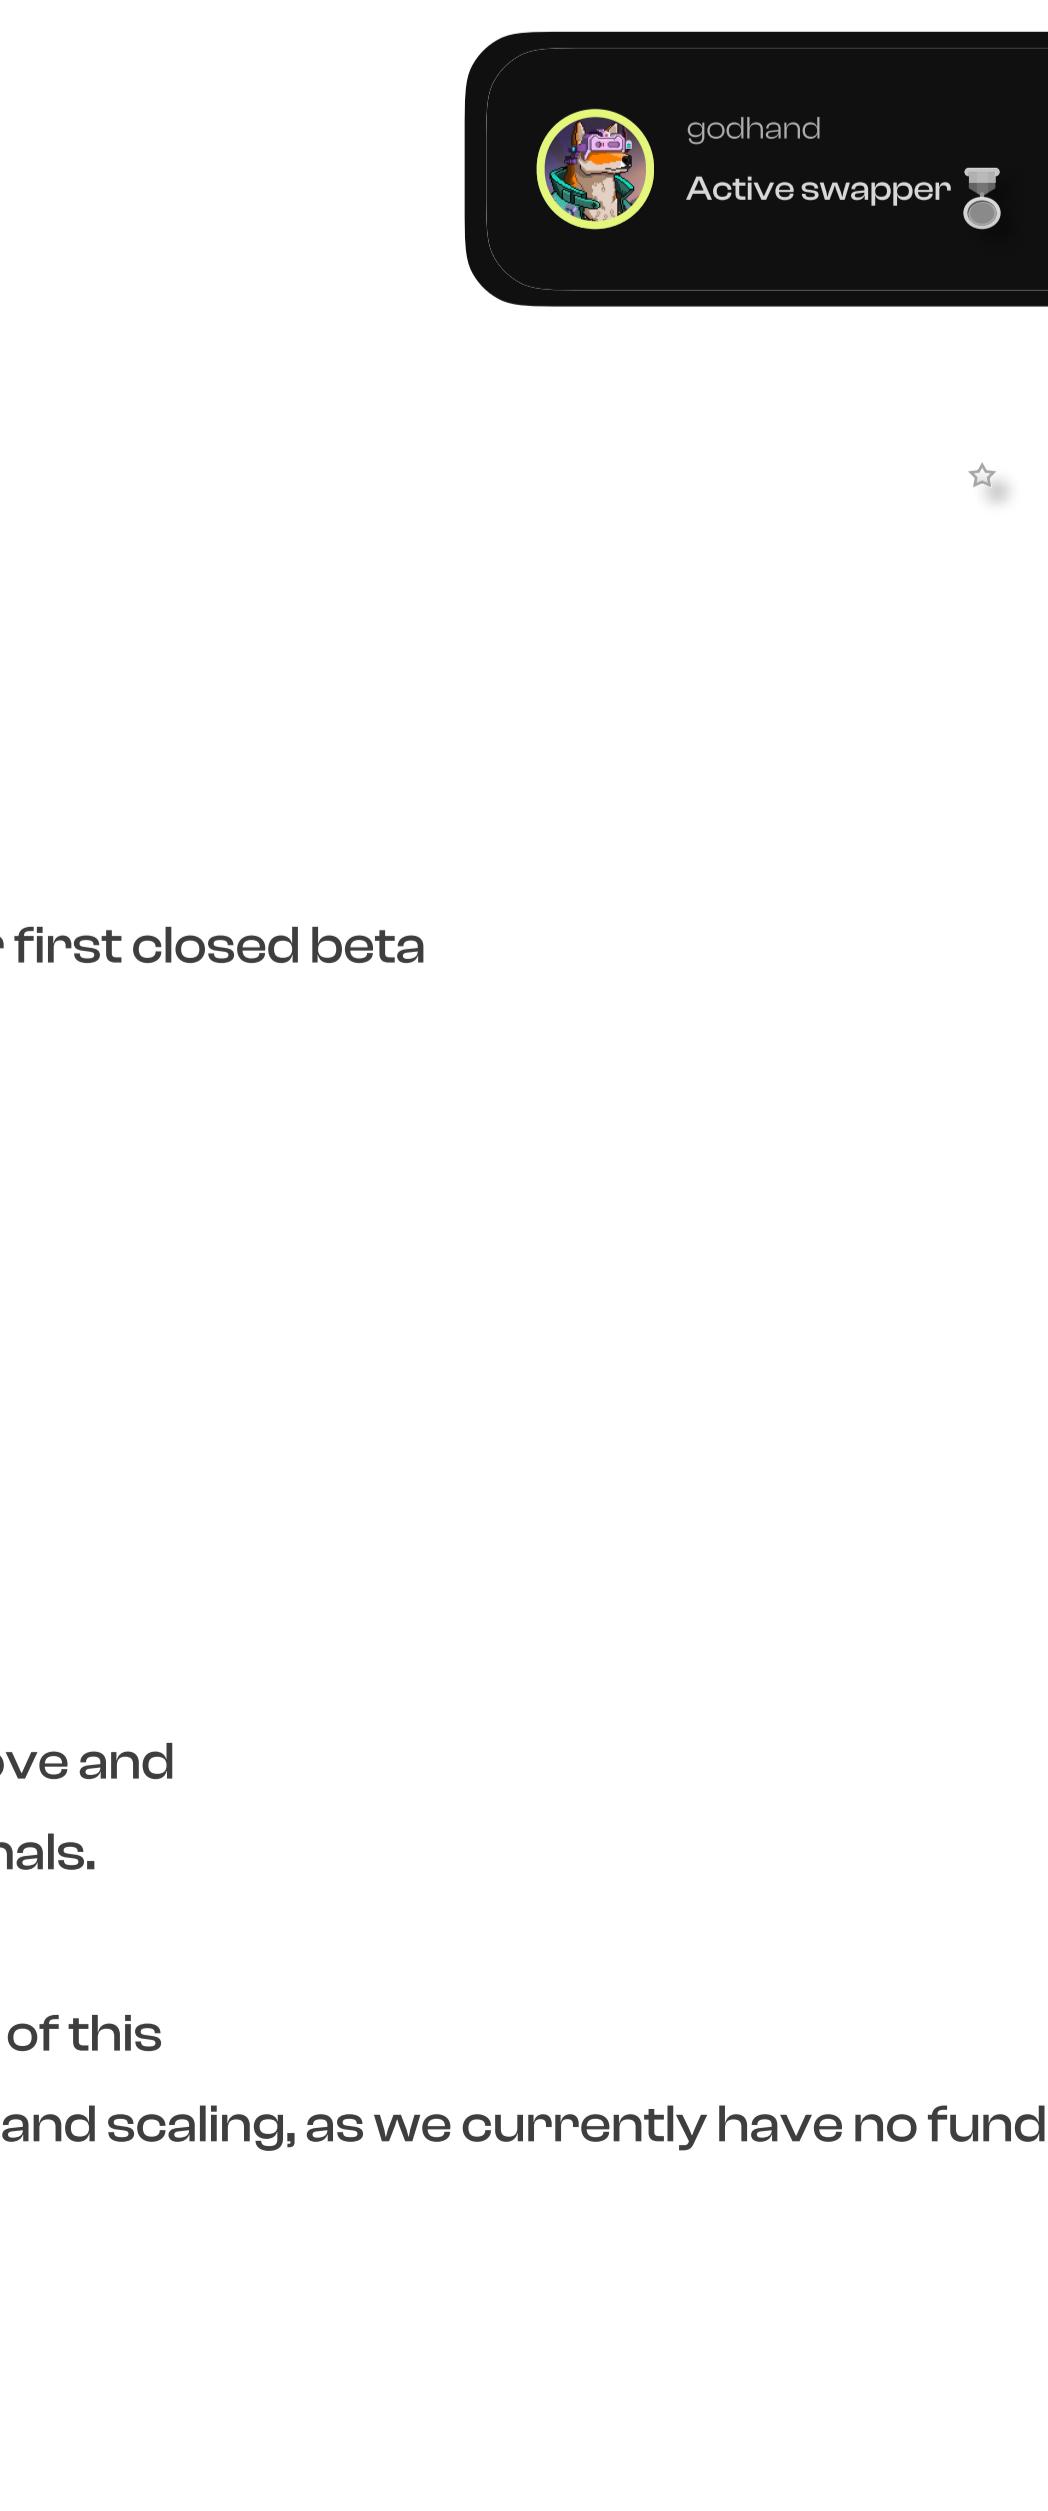

Wagmiclub

Business model

Premium Profile verification - to enhance credibility and combat spam accounts, we offer users premium profile verification by minting our NFT as identity verification.

NFT Badge/Medal fee - each time an organization creates a badge to award merit profiles as proof of work or testimonials, a fee is paid on minting.

Job Board - we are integrating a job board where companies, DAO's can post job listings and opt for featured placements. It's an exciting way to connect professionals and organizations!

Team

We have a team of 3 creatives building at the moment lead by Founder - Jehee(Blockchain researcher & web3 UX Engr)

X@defiprince_

COO - Miracle (Frontend Engr)

X@trinityandtruth

CTO- NatX (Backend & Blockchain developer)

X@NatRonin

Wagmiclub

Milestone

We are currently 3 weeks into building our MVP, once we complete this stage in 3-4 weeks we will have our first closed beta testing with users.

We will then iterate based on their feedback. we are building wagmiclub because we are passionate about on-chain reputation, networking and web3.

Our mainnet launch is planned for Q4 2023, we are actively dedicated to building.

Partnership & Scaling - we will exploit strategic partnerships with organizations, DAOs and companies, to enhance credibility, adoption and utility of our platform. As our user base grows, we will continuously improve and innovate our dapp by introducing new features and functionalities to meet the evolving needs of professionals.

We are currently open to early stage funding from VCs and institutions this will help us foster development of this project. This funding will allow us to hire more devs, web3 marketers and designers to join us in building and scaling, as we currently have no funding.

Exciting times ahead for growth and expansion!
